

KLIPPEL R&D SYSTEM COMPUTER REQUIREMENTS

WHAT KIND OF PC IS REQUIRED?

The PC should meet the following requirements:

- PC Operating System¹⁾: Microsoft Windows XP SP2²⁾, Windows 7, 8 or 10
Klippel recommends using Windows 7 or higher
Note: Support for Windows 7 and later, as well as x64 versions, requires dB-Lab 206 or later
- Min. CPU requirements³⁾: Core 2 Duo 2.5GHz or equivalent
recommended: Core i5 2.5GHz or equivalent
- 4GB RAM
- Min. 1 GB free disk space, plus disk space for measurement results⁴⁾
- Internet connection strongly recommended for online-support
- PC monitor with minimum 1024x768 pixel screen resolution
recommended: 1920 x 1080 pixel
- 2 USB 2.0 interfaces

- 1) While there are no known significant problems with Windows Vista or the respective server systems (Windows Server 2003, 2008 or 2011), they are not regularly tested and we can provide only limited support.
- 2) Microsoft support for Windows XP ended in 2014. We still do support Windows XP for existing installations that are upgraded from an earlier version of dB-Lab. We will phase out support for Windows XP in an upcoming version of dB-Lab.
- 3) These specifications are sufficient for most applications running in dB-Lab. For applications that create or process significant amount of data, a high end system (i7 or equivalent, 64 bit Windows, 8GB RAM) ensures smooth, efficient and uninterrupted operation
- 4) When planning a new PC, also consider the necessity of an automated regular backup to external storage
